Sample Obstetrics and Gynecology Test Questions and Answers

Below is a curated list of typical test questions with detailed explanations of the answers, designed to reflect the style and complexity of real exam scenarios.

1. Question: What is the most common cause of abnormal uterine bleeding in women of reproductive age?

Answer: Anovulatory cycles, often due to hormonal imbalances, are the most common cause of abnormal uterine bleeding in women of reproductive age.

Explanation: Anovulation leads to unregulated endometrial proliferation and breakdown, resulting in irregular bleeding. Conditions such as polycystic ovary syndrome (PCOS) frequently cause anovulatory cycles.

2. Question: Which contraceptive method is associated with a decreased risk of ovarian and endometrial cancers?

Answer: Combined oral contraceptives (COCs) are associated with a decreased risk of ovarian and endometrial cancers.

Explanation: Long-term use of COCs reduces the risk through suppression of ovulation and endometrial proliferation. This protective effect can persist for years after discontinuation.

3. Question: A pregnant woman at 32 weeks gestation presents with painless vaginal bleeding. What is the most likely diagnosis?

- **Answer:** Placenta previa

Explanation: Placenta previa is characterized by implantation of the placenta over or near the internal cervical os, causing painless bleeding in the second or third trimester. It must be confirmed via ultrasound. Differentials include placental abruption, which typically presents with painful bleeding.

4. Question: What is the first-line treatment for pelvic inflammatory disease (PID)?

- **Answer:** Empiric broad-spectrum antibiotics covering *Neisseria gonorrhoeae* and *Chlamydia trachomatis*, such as ceftriaxone plus doxycycline with or without metronidazole.

Explanation: Prompt antibiotic therapy reduces complications like tubo-ovarian abscess and infertility. Treatment is usually outpatient unless there are severe symptoms or suspicion of tubo-ovarian abscess requiring hospitalization.

5. Question: Which tumor marker is most specific for ovarian epithelial carcinomas?

- **Answer:** CA-125

Explanation: Elevated CA-125 levels are associated with epithelial ovarian cancers, especially in advanced stages. However, CA-125 can also be elevated in benign conditions like endometriosis and pelvic inflammatory disease.
