Flow Chart Structure and Navigation Logic

Designing an effective flow chart involves understanding logical sequences and decision points. The typical flow can be broken down as follows:

Start ? Search

- User begins at the homepage and inputs travel details.
- The system validates inputs and fetches search results.

Results ? Seat Selection

- User reviews options; selects a preferred bus.
- The system checks seat availability.
- If seats are available, proceed; otherwise, prompt for alternative options.

Seat Selection ? Passenger Details

- User enters passenger information.
- Validation ensures data completeness and correctness.

Passenger Details ? Payment

- User chooses payment method.
- System facilitates secure transaction.

Payment ? Confirmation

- On successful payment, generate ticket.
- On failure, options to retry or cancel.

End ? Booking Complete

- User receives confirmation.
- Option to view, print, or share ticket.

Decision points such as seat availability, payment success, or user cancellations determine the flow path, making the process dynamic.
